

AI that doesn't just detect supply chain risk. It solves it.

Supply chain disruptions are accelerating, regulations are multiplying, and hidden supplier dependencies keep exposing organizations to costly surprises. Resilinc's agentic AI platform continuously senses risk, recommends the best response, and executes intelligent workflows, helping your organization become more resilient, compliant, and autonomous.

Realize outcomes that protect and grow your business

- ✓ **Protect revenue:** Keep production and shipments moving with AI-assisted workflows
- ✓ **Reduce disruption costs:** Predict and prevent disruptions before they impact revenue and brand
- ✓ **Ensure business continuity:** Build a self-healing supply chain that keeps running under pressure
- ✓ **Improve regulatory readiness:** Continuously adapt to changing compliance requirements
- ✓ **Improve supplier collaboration:** Coordinate response with suppliers in one shared workspace
- ✓ **Increase labor efficiency:** Free your team from manual triage with intelligent automation

Autonomous AI built on the industry's most intelligent supply chain graph

01 • BIGGEST DIFFERENTIATOR

Multi-tier supply chain visibility

Create a product-aware supply chain graph that connects suppliers, sites, parts, materials, and BOMs with autonomous mapping and targeted validation.

2. Contextual risk intelligence

Identify where risks are emerging, understand their business impact, and prioritize the products, parts, and materials that matter most.

3. Agentic AI orchestration

Deploy purpose-built AI agents to recommend next steps, automate workflows, and orchestrate response across your supply chain.

AI AGENTS

Automate response with agents built for real business problems

Resilinc deploys specialized agents trained in 16+ years of supply chain data, industry knowledge, regulations, and real-time events. Three flagship agents anchor the platform today.

Tariffs Agent

Continuously monitors tariff changes, models cost exposure and recommends sourcing strategies to reduce cost and risk

Forced Labor Compliance Agent

Identifies forced labor risk, automates supplier due diligence, and recommends compliant sourcing alternatives

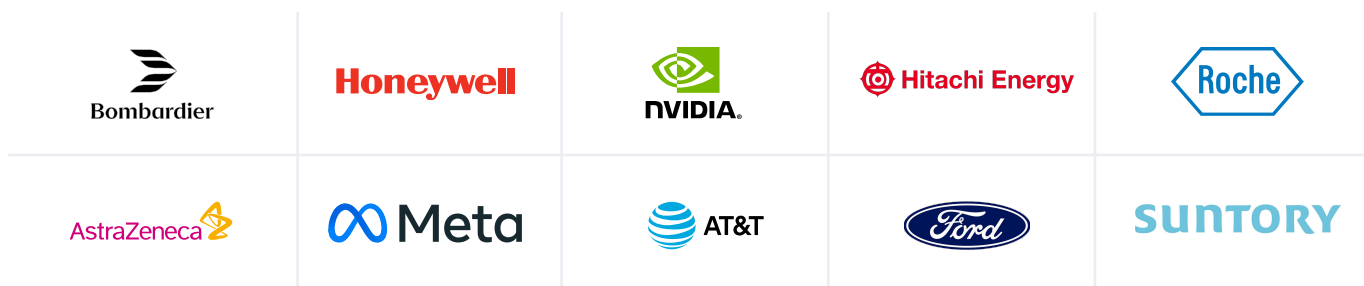

Disruption Agent

Detects disruptions, assesses supplier impact, and drives coordinated response through WarRooms, workflows, and supplier outreach.

Platform capabilities

- **Agentic AI framework:** Intelligent agents that sense, recommend, and act
- **Multi-tier mapping:** Deep visibility into parts, sites, and sub tiers with autonomous + validated data
- **Event monitoring:** Real-time risk detection with continuous monitoring of 100M+ data sources
- **Material breakdown / Material flow:** Visibility into material composition, movement, and upstream dependencies
- **Compliance automation:** Automated assessments, supplier outreach, and risk scoring
- **Impact simulation:** Predictive simulations to prepare for disruptions and protect operations
- **Material Intelligence:** Track rare earths, conflict minerals, and other critical materials
- **Enterprise integration:** Embed supply chain intelligence across enterprise systems with APIs, MCP, and Databricks Delta Sharing
